

Mikhail Krupenkov

Python Backend Developer (Middle)

Brest · Minsk · open to remote, hybrid, or office

Email: work@falser.dev · GitHub: <https://github.com/FalseR20> · LinkedIn: <https://www.linkedin.com/in/falser>

Summary

Python backend developer, 4+ years of commercial experience. I ship Django and FastAPI services to production, run them on PostgreSQL, and keep critical legacy systems. Recent work: embeddings-based semantic search, Docker/Nginx CI/CD, Celery/Redis background jobs. Open to remote, hybrid, and relocation.

Professional Experience

Middle Python Backend Developer

Belarusian Railway · national railway operator, internal IT systems · On-site

July 2024 – July 2026 · 2 years

- Designed and shipped an embeddings-based semantic search service end-to-end: Python API, integration with internal railway systems, and a React/TypeScript UI for staff search over operational documents.
- Replaced manual production releases with Docker, Nginx, and CI/CD so backend services could be deployed repeatably.
- Delivered backend integrations and release support for CAB RW (Flutter/Firebase) through Apple App Store publication — from API contract to store submission.
- Maintained production railway operations systems on PostgreSQL (and legacy SQL databases). Downtime was not an option.

Middle Python Backend Developer

Atlant Software · restaurant platform · Remote

November 2023 – July 2024 · 9 months

- Built Django REST APIs and PostgreSQL models for a restaurant platform: orders/menu-style business logic, data model, and third-party integrations.
- Owned the production quality loop on the backend: pytest, code review, Git workflow, and CI/CD — features shipped only through the pipeline.

Junior Python Backend Developer

Intelligent Semantic Systems · AI / knowledge bases · Remote

March 2022 – September 2023 · 1 year 7 months

- Built Python backend services around AI/knowledge-base pipelines: ingestion, automation, and internal integrations used by product teams.
- Shipped a Flask service that translated and preprocessed knowledge-base file formats, with tests and background processing instead of a one-off script.
- Extracted shared Python libraries and async/background job helpers so other services did not reimplement the same pipeline glue.

Education

Brest State Technical University · Computer Science · 2020–2024

Kaspersky Lab · Basic Cybersecurity Program · 2025

Technical Skills

Languages & frameworks: Python, Django/DRF, FastAPI, Litestar, Flask, Pydantic, asyncio, pytest

Data & storage: SQL, PostgreSQL, SQLAlchemy, Alembic, MongoDB

Infrastructure: Git, CI/CD, Docker, Nginx, Redis, Celery, RabbitMQ, Kafka

Monitoring: Prometheus, Grafana, Sentry

Also used: TypeScript, React, Flutter, semantic search, LLM integrations, Linux

Languages

English – B1+

Russian – native
